

TRANSFORMING the face of HEALTH LEADERSHIP AROUND THE WORLD...

into one where **diverse, accomplished leaders**
collectively improve health outcomes.

OUR MISSION

To empower and elevate talented women to use their expertise and leadership skills to improve health and gender equality around the globe.

Despite women comprising **70% of the health workforce**, they are an untapped and under-utilized talent pool – filling **only 25% of senior** and **5% of top** health organization **positions**.

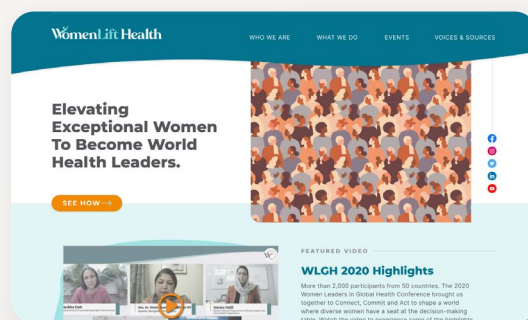

BUILDING & EXPANSION

In 2019, with support from the **Bill and Melinda Gates Foundation**, **WomenLift Health** began building scalable platforms to deliver interventions supporting women's leadership in health. Our geographic footprint will rapidly expand over the next decade, beginning with Africa and India, to reach tens of thousands of women and male allies. Our model is country-owned and country-driven, with interventions led, designed and executed by --and with -- local partners.

Designed to achieve **scale**, **diversity** and **transformative change**, WomenLift Health is empowering and engaging tens of thousands of women and male allies in health. We are convening men and women to learn, share and explore at global and regional Women Leaders in Global Health conferences and local forums. We are building a curated digital platform to amplify evidence, highlight best practices and support women leaders to network and continue to learn and grow. By investing in individual leadership skills, building community and influencing the environments in which people live and work, WomenLift is catalyzing transformative change on three levels -- the individual, institutional and societal.

Utilizing a portfolio of strategic interventions, WomenLift Health is acting to create new, **more equitable paths forward**.

We are tackling the persistent inequalities within health leadership around the world and addressing the longstanding barriers that women face.

forward

THE LEADERSHIP JOURNEY

Our flagship program is a highly-targeted training for **mid-career women in health** working across countries, cultures, sectors, and disciplines. By equipping women with new tools, ample resources and an expanding community of peers, mentors and coaches, WomenLift Health supports them to better navigate their own path to leadership and be **agents of change** within their institutions and beyond.

THE NEED FOR DIVERSE LEADERSHIP

WomenLift Health is demanding diverse leadership to address the world's **growing health challenges**. Neglecting women, who comprise half the talent pool, has a direct impact on health resource allocation, research, policies, financing and programming, hindering our ability to tackle critical challenges. When women have decision-making authority, whole societies reap the benefits through improved health systems.
